

Uber Eats

Done by Sai Kumar

Project documentation:

Abstract

The main aim of project is to represent the uber eats management system maintain the uber relationship between customer and restaurant

Improve the productivity to keep track on adding many others database

The uber eats developed by using html CSS JavaScript

By tracking food Oder.

Aim

The aim of this project to review neither than restaurant and ordering food from online by using uber eats

Uber eats has many others platform's

Theme of the project:

Simple Oder from online.

No traveling

Customer stratification enclosed

The Oder by delivery agent

Out look:

Here I have done the project using uber eats clone

The idea I have used is location in app

I have used Delivery and pickup location.

The idea of clone is to grab the at tentation of customer so that it is like both dining and food delivery option so that every can feel free for an eating and enjoying food.

Logo of the page

UberEats

Dash board of web page

Delivery icon-

The Delivery agent will picks the items in cart by the delivery agent.

Location it is approximates until 10-15 kms away from the location

And show the content of uber Oder

When You Are Hungry Now

The Fastest Food Delivery to Your Door

[View All](#) [←](#) [→](#)

Chicken Nuggets 4.2
\$420/- Delivery fee | 20-30 MINS |\$
